Work authorization

Sponsorship required to work in the US

Work experience

Full Stack Developer

BIC | Toronto, ON

April 2019 to Present

- Use Laravel, Vue.js, React, and MySql to add features for consumer page and internal operations
- Use Python and Machine Learning to develop AI strategies for data predictions

Technical Analyst, Operations

Benevity | Toronto, ON

January 2017 to April 2021

Benevity provides tools for employees of large companies to participate in giving causes including donations, volunteering and grants. As part of the Toronto team we manage the Grants application.
I have helped troubleshoot product issues as well as provide custom solutions for clients to integrate with the SaaS product.
While on the team we have greatly reduced the backlog of todo items as well as provide creative solutions to better enhance the user experience.

Intermediate Web Developer

bid13.com - Online Storage Auctions | Scarborough, Ontario, Canada

March 2016 to May 2017

Provide Support with a variety of web technologies for internal applications for the Storwell Group as well as the BID13 product.
Design and build custom modules for the Drupal Framework.

While working here I assisted in major code clean-up as well as provide technical assessments of system logic.
I also built the process for triggering emails and alerts based on changes related to user activity.

Developer / System Analyst

Techcom Software Solutions | Vaughan, ON

September 2014 to March 2016

Responsibilities

Techcom creates high security corporate software and solutions with a focus on financial applications.

- Troubleshoot and develop for extremely complex systems
- Provide solutions with PHP and MySQL

Accomplishments

- Encourage change of developer tools used
- Quickly evolve into the role and expectations
- Permitted to work on secure, client-facing applications early-on

Skills Used

- Heavy PHP and MySQL skills.
- Problem solving
- Interpret business requirements
- Teamwork and leadership
- Organize and prioritize tasks for self and team members

PHP and Front-End Web Developer

3conx Corporation, www.3conx.com | Toronto, ON

December 2013 to September 2014

Responsibilities

3conX is a provider of tools and resources for optometrists and their clinics. I worked on several different projects for client websites, working on the Eyeconx PHP application, or on other internal tools and projects.

Accomplishments

- Provide PHP solutions to the existing EyeconX (a practitioner-patient communication tool) web application through testing and updates.
- Assist in design and fully build the new product website for www.EyeConX.net
- Realize client requests for clinic website customization and maintenance
- Redesign and build the company and client websites to better meet modern standards and compatibility

Skills Used

- Use PHP, Smarty, HTML, jQuery, JavaScript and CSS
- Debug and test to find the source of issues or to insure quality
- Improve performance and user experience
- Design and build website or features for a website

Web Developer and I.T. Technician

Jackpine Digital Inc., www.Jackpine.co | Ottawa, ON

October 2013 to December 2013

Responsibilities

Create websites from Photoshop designs as well as providing IT support and technical advice for a Digital Agency. Assist in providing smart solutions through technology for clients to promote and sustain their businesses.

Accomplishments

- Fully build www.BeyondThePale.ca for a local brewery based on the designer’s concepts and the client’s input using HTML5, CSS3, JavaScript, JQuery, Google API, and other technologies.
- Created custom typing effect plugin for Jackpine. Git-repo: github.com/jheagle/title-switcher.git

- Use responsive design to make websites viewable on mobile devices and cross-browser compatibility.
- Build with Google Map API

Skills Used
- HTML5, CSS3, JavaScript, jQuery, Google Map API
- GitHub and GitRepo
- Use Bootstrap to assist in responsive design and cross-browser compatibility

Intern Web Programmer
Jackpine Digital Inc., www.Jackpine.co | Ottawa, ON
September 2013 to October 2013

Responsibilities
Complete courses for a variety of web technologies in preparation to build client web projects.

Accomplishments
- Successfully learn JavaScript, jQuery and improve understanding of CSS3 as well as learn some Ruby.
- Noticed that the developer was struggling with a unique development challenge. This led to the implementation of the unique header which displays live city cams in most browsers at the temporary website for an event called 'We Make The City'.

Skills Used
- Use HTML5 and CSS3 to build a website
- Use some JavaScript and jQuery to add desired effects and fixes to websites
- Debug and test JavaScript to repair and improve for desired results

Education

Computer Engineering Technology - Computer Science
Algonquin College | Ottawa, ON
2010 to 2013

Skills

• Created websites and applications with: ASP.NET with Razor, JSF, JSP, HTML5, CSS3, PHP, JavaScript, Node.js, and XML. • Designed and managed databases with: MSSQL, and SQL (Oracle), Java DB (Derby). • Assisted in a team with version control software such as Git and GitHub. • Developed and tested with: Android, C, C++, C#, Java, and .NET. • Worked with: Mac OS, QNX, UNIX, and Windows
